1.REQUIREMENTS AND PREREQUISITES

1.1 Overview

This joint process between UiPath and Doc Insights is initiated by new policies being added to ImageRight. This will trigger a bot to pull multiple documents – from ImageRight it will pull the binding information, proposal, quote, and prior policy. From Sagitta it will pull a JSON of current policy details from Sagitta. The bot will then push these documents to Doc Insights to generate an excel checklist that compares the Sagitta information to the rest of the documents. The bot will then use this checklist to make updates to Sagitta, mark up the excel checklist to record which updates it made to Sagitta and send the completed workbook to the Account Manager.

1.2 Key Contacts

Role	Name	Contact Details (Email/Phone)
Project Sponsor	Glenn Vatasin	Glenn.Vatasin@usi.com
Project Manager	Tonya Dowell	Tonya.Dowell@usi.com
Project Management Support	Julie Ramsey	Julie.Ramsey@usi.com
Project Lead/SME	Marcella St. Clair	Marcella.StClair@usi.com
ImageRight SME & Training	Jeff Brown	Jeff.Brown@usi.com
CL Training	Ida Shook	Ida.Shook@usi.com
UCompare Product Owner	Molly Smith	Molly.Smith@usi.com
UCompare Developer	Kiran Kotte	Kiran.Kotte@usi.com
RPA PMO Manager	Andrea Simpson	Andrea.Simpson@usi.com
RPA Development Manager	Phil Williams	Phillip.Williams@usi.com
RPA Business Analyst	Maddie Keist	Madeline.Keist@usi.com
RPA Developer	Luis Rodriguez	Luis.Rodriguez@usi.com
RPA Solution Architect	Matt Winters	Matt.Winters@usi.com

1.3 High-Level Process Details

Feature	Description	Value
Schedule	<i>Input any information on scheduling the bot, i.e. bot must run 9 a.m. EST on the second Monday of the month.</i>	Bot will run 24/7, receiving real-time event notifications from MDS
Triggers	<i>What triggers the bot? Examples: Action items, items in a queue, or scheduled trigger</i>	MDS event trigger when new policy document is uploaded to ImageRight
Attended/Unattended	<i>Is this process going to be an attended or unattended bot? This will affect licensing requirements</i>	Unattended/Human in the Loop
Licensing	<i>Are there any considerations to be made for our UiPath licenses and accounts? Are there any additional accounts that need to be created?</i>	UiPath Agent & RPA licenses needed
AD Group/Distribution Lists	<i>Are there any Active Directory groups or Distribution Lists for this process?</i>	N/A
Dependencies	<i>Are there any processes that are dependent on this process?</i>	• Doc Insights policy checklist creation in UCompare tool • ImageRight workflows

1.4 Volumes

Type	Metric	Comments
Volumes	<u>2024 Tracking Totals:</u> Completed Policy Checking Tasks: 160,544 Patra Checked Total: 118,384	No notable seasonal peaks

1.5 Account Access

Application	Expiration policy on passwords set up for accounts	Who is responsible for account creation, password resets or assistance with the applications utilized?
ImageRight	N/A	UiPath Support Team
Sagitta	N/A	UiPath Support Team
UCompare	N/A	DocInsights Team

1.6 Mappings

[3. Mapping Files](#)

1.7 Risks

- RPA will handle the beginning of the workflow, hand off to UCompare, then RPA will complete the transaction. If one of these processes goes down, it will impact the rest.
- There are no unique identifiers for locations and other schedule items in Sagitta, therefore the bot must determine which rows to add, edit, or delete by comparing new and old data. This could lead to unintentional changes if matches are not exact.
- There is currently not sufficient test data in lower ImageRight environments to perform a thorough UAT, therefore documents will need to be added to ImageRight for test clients (and matching clients/policies in Sagitta) and/or a closely supervised "pilot" will be required (hybrid UAT/production phase).

1.8 Acceptance Criteria

- Phase 1 Acceptance Criteria (Policy Checking)
 - Receive event trigger when policy documents are uploaded to ImageRight by Account Managers
 - Perform validations and determine which items can be worked based on eligibility. Handle ineligible items based on reason for ineligibility for automation.
 - Find existing task in ImageRight and update attributes throughout the process OR create new task in ImageRight if one does not yet exist linked to the document.
 - Pull the new policy, prior policy, binding info, and proposal, and quote from ImageRight (in a later phase, this responsibility will shift to UCompare)

- Generate Policy Checklist in UCompare and upload to the new year policy folder in ImageRight
- Assign task in ImageRight to Patra for detailing once policy check is complete.

1.9 SLAs

SLA is TBD.

1.10 Out of Scope

- Sagitta “rollback” functionality is not included in this process. If mistakes are identified, they must be handled manually
- Sagitta detailing is out of scope for Phase 1 but should be developed concurrently as resources are available.
- Duplicate checking is out of scope for automation as it will be handled by MDS upstream from the bot

2.EXCEPTION HANDLING AND NOTIFICATION

2.1 Exception Handling

- Known business exceptions will be handled in ImageRight
- Unidentified business exceptions will be forwarded to Tonya.Dowell@usi.com & Marcella.StClair@usi.com
- System exceptions will be sent to **UiPath Support Team** and **Tonya & Marcella**

2.2 Notifications

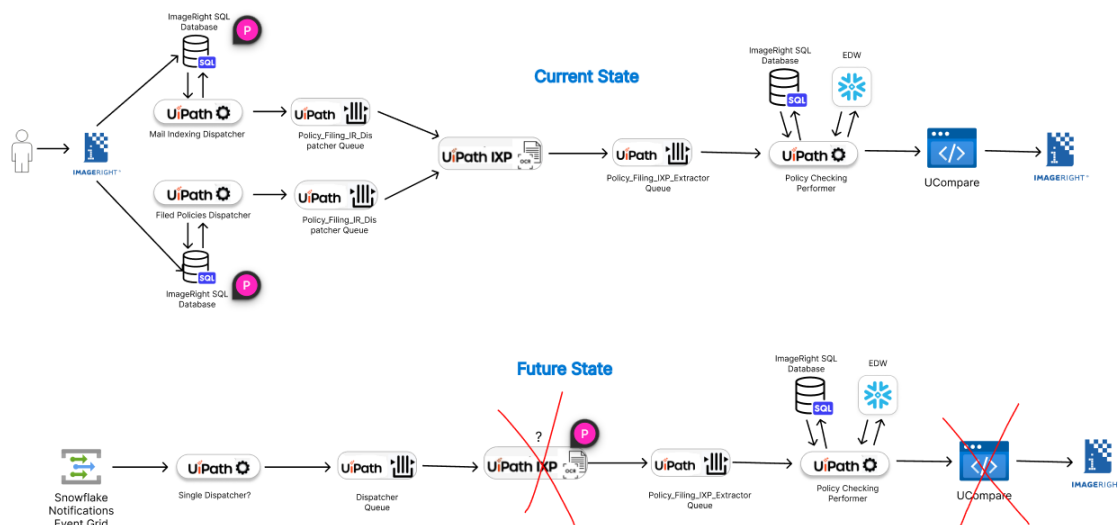

All success notifications will be handled through ImageRight by setting task attribute and reassigning to a servicer.

2.3 Reporting or Logging Requirements

- UiPath Orchestrator Logging. Business exceptions should be logged as successful with reason included (no failure email needed for these scenarios if IR task attributes are successfully updated). No success emails generated. Generate system exception emails – send to UiPath support team AND business. Unidentified exceptions will be forwarded to Tonya.Dowell@usi.com & Marcella.StClair@usi.com . Look into Insights reporting – would need to be owned by the business if so.

3.PROCESS MAPS

3.1 High Level To-Be Flow Diagrams (Bot)

3.2 ImageRight Workflows (Context)

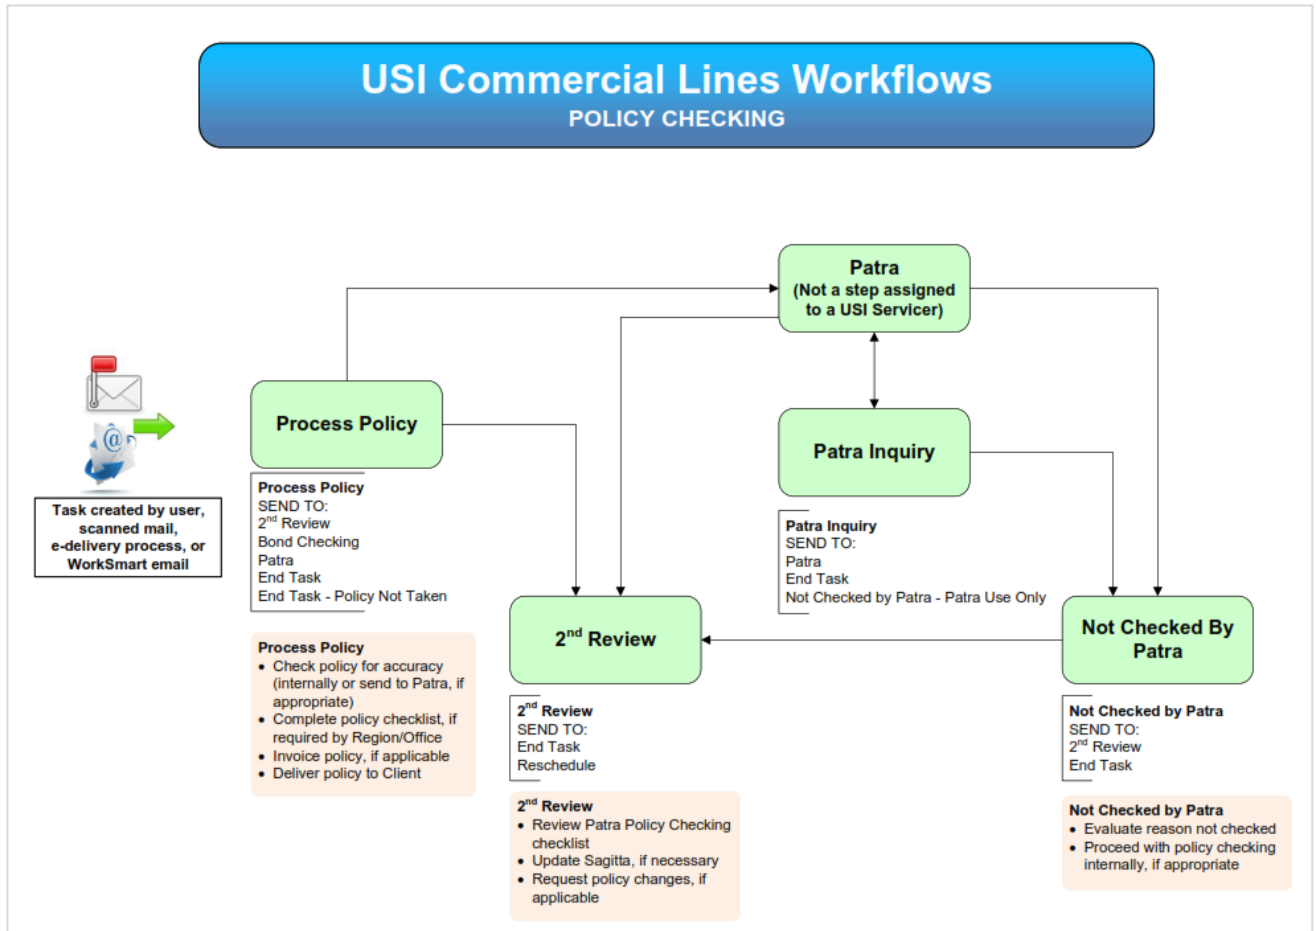

Figure 1. ImageRight Policy Checking Workflow (original/1.0)

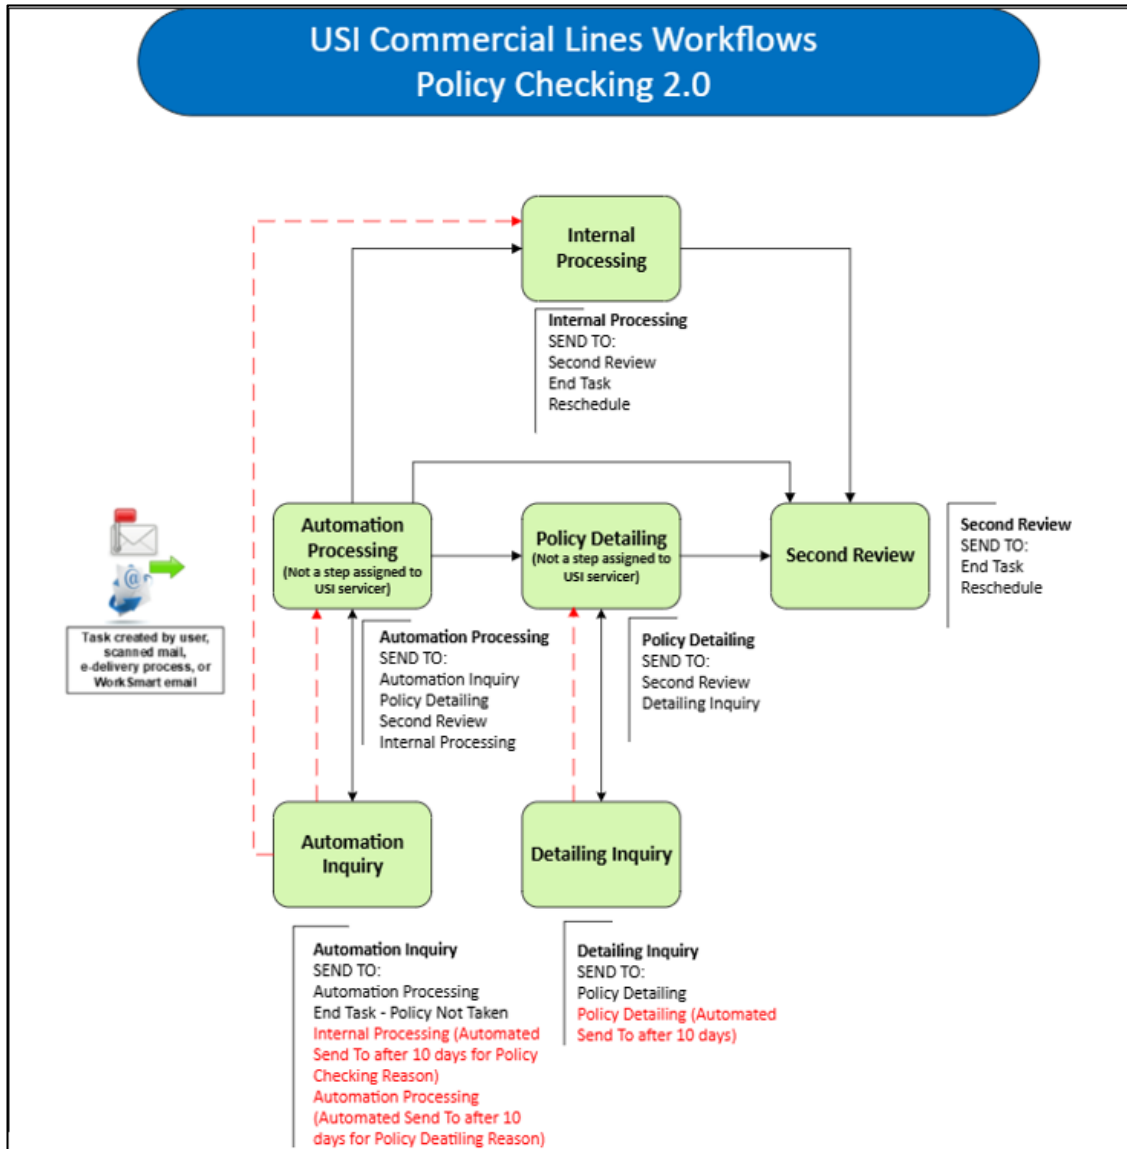

Figure 2. To-Be Policy Checking Workflow – ImageRight (2.0 workflow)

4.DETAILED PROCESS STEPS

4.1 Detailed Process Actions

4.1.1 Receive event & perform validations

4.1.1.1 Bot will receive event trigger from MDS for all policies filed into ImageRight, real-time.

4.1.1.2 Between event trigger payload, Snowflake, and ImageRight, ensure all the following data items are gathered to be used in the process:

- clientcode
- pageid
- document / doc folder
- policyid/itemID
- prior term policyID/itemID
- filepath
- pagedescription
- policyyear
- coveragecode
- drawername
 - LOB/Commercial-Lines-only scoping
- locationname (region / parent drawer)
- clientname
- policyfolderdescription
- divisionname (attr 56, ≠ 811)
- producer1name (attr 49, ≠ Patra)
- Drawer exclusions by location ID
- fileid (ImageRight file ID)
- policyfolderid
- yearfolderid
- taskid
- taskfolderid / taskfolderdoctype
- newmaildocid
- effective date
- expiration date
- department code
- CNR (Cancel Non-Renew)
- CNR Date

- Servicer Code
- if PKG – need component coverages/component LOB

Figure 3. Front-end view in Sagitta of some of the data items

4.1.1.3 Make exclusions based on the rules below (do not update task attributes in ImageRight, just stop working item and move to the next item.)

Field	Exclusion Rules	Resolution
Drawer Name	Only include Commercial Lines	Log reason & end processing
Region/Location Name	Exclude USR, AF, USICA, Training, Temp	Log reason & end processing
Division Name	Exclude 811	Log reason & end processing
Producer 1 Name	Exclude any name containing "Patra"	Log reason & end processing

4.1.1.4 Evaluate coverage code eligibility based on the [Coverage Code Eligibility Table](#). All eligible items can move to the next step. For ineligible items in New Mail, log reason and end processing. For all other ineligible items, check for a PC2.0 task associated with the policy document. If PC2.0 task already exists, update task attributes according to [4.2.5](#). If no PC2.0 task exists, log reason & end processing.

4.1.1.5 For each **New Mail** item, Check for a Policy Checking 2.0 task and update step to "Automation Processing". If not found, check for a Policy Checking (1.0) task, route the task to the PC2.0 workflow, and assign to step "Automation Processing". If neither task exists, create a new PC2.0 task in step "Automation Processing".

4.1.1.6 All New Mail items should now be in the 2.0 workflow. Make further exclusions for New Mail and All Other Items based on the following table:

Field	Exclusion Rules	Resolution – New Mail Items	Resolution – All Other Items
Department Code	Exclude 287 and 289	4.2.4 Ineligible Department Code	Log reason and end processing
Department Code	Exclude 288	Carrier Service Center Policy	Log reason and end processing

Servicer Code	Exclude if in the Carrier Service Center list	Carrier Service Center Policy	Log reason and end processing
CNR	Exclude if M	4.2.9 Policy in Marketing Status	Log reason and end processing
CNR	Exclude if Z	4.2.12 Inactive Policy	Log reason and end processing
CNR & Effective Date	Exclude if CNR is C or N AND CNR Date is equal to the Effective Date	4.2.12 Inactive Policy (flat canceled/nonrenewed with no coverage in force, Z status)	Log reason and end processing

4.1.1.7 ***This step depends on determining how MDS locates policy ID using policy number, and if a match is not found, will they pass the bot an event with a null policy ID field? Are they using the same matching algorithm that we were using to match when policy numbers have extraneous characters/prefixes/suffixes in Sagitta?:

Look up the policy in Sagitta and retrieve the following data: Item ID, Prior Term ID, coverage code, department code, effective date, expiration date, CNR (Cancel Non-Renew), Servicer Code and CNR Date. If no results are returned from the query, go to [4.2.3 Policy Header Not Found in Sagitta](#).

4.1.1.8 ***This step depends on determining how MDS determines policyID – are they ensuring the policy year in the policy doc matches the eff/exp in Sagitta? If no, we can continue to make this comparison and exclusions:

Locate a result that has the same effective date and expiration date as the policy. If a match is found, proceed to next step. If no results have matching eff/exp dates, check the coverage code eligibility. If coverage code is eligible, route the task to the PC2.0 workflow and go to [4.2.5 Sagitta Effective/Expiration Dates Do Not Match Policy](#). If coverage code is ineligible, log exception and stop processing.

4.1.1.9 For All Other Items (items not filed in New Mail): Check for a Policy Checking 2.0 task and update step to “Automation Processing”. If not found, check for a Policy Checking (1.0) task, route the task to the PC2.0 workflow, and assign to step “Automation Processing”. If neither task exists, create a new PC2.0 task in step “Automation Processing”. (Same step as 4.1.1.4 for New Mail)

4.1.1.10 Move any items still in New Mail to the destination folder.

4.1.1.11 Close out CL Binding – Waiting for Policy task linked to the policy folder or an object within the policy folder of the policy being checked. If one result is returned, close out the task. If no results or multiple results are returned, do not close any tasks, and proceed to step 4.1.1.16.

4.1.1.12 Item validations are complete.

4.1.2 Policy Checking Steps

- 4.1.2.1 Retrieve Sagitta detail for current and prior year via Deliverables Hub – Policy Checking Document.
- 4.1.2.2 Query ImageRight for Second Review Documents: Query for Carrier Binder, Carrier Quote, Carrier Proposal, and USI Proposal from the current policy year folder **AND** query for the Prior Policy (using the Prior Term ItemID from the [Snowflake query](#)). If at least 1 of these documents is found, proceed with the process. If no documents are found, reassign task to Servicer 1 to upload documents and reassign back to bot when ready. If 0 results are returned, go to [No Supporting Documents Found](#)

Second Review Document	ImageRight Document Type	Document ID	Document Extension	ImageRight Folder Type	ImageRight Folder Type ID
Carrier Binder	Binding Info	89	.pdf	Policy Information	154
Carrier Quote	Binding Info	89	.pdf	Policy Information	154
Carrier Proposal	Binding Info	89	.pdf	Policy Information	154
USI Proposal	Proposal	82	.pdf .docx	Quote Analysis and Proposal	114102273
Prior Year Policy	Policy	88	.pdf	Policy Information	154

- 4.1.2.3 Navigate to UCompare website (no login required, all USI users will have access)

- Dev: <https://utech-dev.usii.com/ucompare/>
- QA: <https://utech-qa.usii.com/ucompare/>

CONFIDENTIAL AND PROPRIETARY: The information contained herein is confidential and proprietary information of USI Insurance Services, LLC. Recipient agrees not to copy, reproduce, distribute or disclose it to any other person, in whole or in part, without the prior written consent of USI. © 2023-2025 USI Insurance Services. All rights reserved.

- 4.1.2.4 Search company by name (client name in Sagitta). If multiple results are found, try to select based on client code. [If no results are found, log business exception with reason and end processing.] Click Select.

The screenshot shows the USI U Compare search interface. At the top, there's a blue header with the USI logo and "U Compare". Below it, a search bar labeled "Select a Company Name" contains the text "AABCO Trucking LLC" and a magnifying glass icon. Below the search bar, a table displays search results. The table has columns: Name, Client Code, Type, Website, Industry, and Subvertical. There is one record for "AABCO Trucking LLC" with Client Code "Prospect", Industry "Transportati...", and Subvertical "Trucking". A red box highlights the "Select" button at the end of the row. At the bottom right, it says "Rows per page: 10" and "1-1 of 1".

The screenshot shows the USI U Compare search interface. At the top, there's a blue header with the USI logo and "U Compare". Below it, a search bar labeled "Select a Company Name" contains the text "CIEE, Inc." and a magnifying glass icon. Below the search bar, a table displays search results. The table has columns: Name, Client Code, Type, Website, Industry, and Subvertical. There are two records for "CIEE, Inc.". The first record has Client Code "CIEE", Type "Client", Website "http://www.ciee.org", Industry "Education", and Subvertical "School Districts". The second record has Client Code "CIEEINC", Type "Client", Website "http://www.ciee.org", Industry "Education", and Subvertical "School Districts". Red boxes highlight the "Client Code" column and the "Select" button for the second record. At the bottom right, it says "Rows per page: 10" and "1-2 of 2".

- 4.1.2.5 Determine LOC using the [mapping file](#). If PKG, determine the individual coverages and then determine the LOC roll up(s).
- 4.1.2.6 Use the dropdown menus to select Line of Business "Commercial Lines", Select template "Policy Checking", and select Line of Coverage

The screenshot shows the USI U Compare dropdown menus. At the top, there's a blue header with the USI logo and "U Compare". Below it, there are three dropdown menus. The first dropdown menu is labeled "Line of Business" and has "Commercial Lines" selected. The second dropdown menu is labeled "Templates" and has "Policy Checking" selected. The third dropdown menu is labeled "Line(s) of Coverage" and has "Auto, General Liability, Worker..." selected. Red boxes highlight the three dropdown menus.

4.1.2.7 Upload the following documents to UCompare and select the corresponding document type from the dropdown: (* = required).

Document	From	UCompare Dropdown Selection
New Policy*	From event notification/ImageRight	Policy
Policy Checking Document (current year)	From Deliverables Hub	Sagitta Detail
Policy Checking Document (prior year)	From Deliverables Hub	Prior Policy Sagitta
Prior Year Policy	From Second Review Documents query	Prior Policy
Binder	From Second Review Documents query	Carrier Binder
Carrier Quote	From Second Review Documents query	Carrier Quote
Carrier Proposal	From Second Review Documents query	Carrier Proposal
USI Proposal	From Second Review Documents query	USI Proposal

- 4.1.2.9 Once comparison is successfully generated, download the Policy Checklist (most recent item in the “Completed Comparisons” table) to temp location. Add client code and timestamp to create a unique name.

- 4.1.2.10 Add ClientCode and timestamp to create unique file name.

- 4.1.2.11 Upload Policy Checklist Excel file from the temp location to Policy Term folder (Policy Term folder path from [query](#) for filed policy items and from [folders query](#) for mail indexing items) in ImageRight as type Checklist - Other with a description in the following format: “Coverage Code, Policy Number, YY-YY Policy Checked”. – [Get Policy Folders](#)

4.1.2.12 Update task attributes: Step “Policy Detailing”; Priority “2”.

The dialog box titled "Specify Task Attributes" shows the following fields and values:

Field	Value
Selected task(s)	Policy Checking
Send To	Second Review
Assignment	Servicer 1
Manual User	None
Task Description	No Change
Reason Not Checked	
Inquiry Reason	
Other Inquiry Reason	
Response to Inquiry	
Priority	2

At the bottom, there is a checkbox for "[Release Task(s)]" which is checked, and "OK" and "Cancel" buttons.

4.1.2.13 End process.

4.2 Exception Handling - ImageRight Inquiries and Escalations

See the subsections below for instructions for each known exception scenario. Tasks that are assigned to “Automation Inquiry” should either be processed by servicers OR could be sent back to Automation Processing if the issue is resolved by a servicer. Any items that are sent to Internal Processing are terminal cases for the automation and will not need to be followed up on. See [ImageRight Policy Checking Workflow 2.0](#) for the workflow map and additional detail.

4.2.1 ~~Incorrectly indexed mail (endorsements, audits, etc.)~~

Update the following task attributes, then select “OK”.

- ~~Send To: Internal Processing~~
- ~~Assignment: Manual~~
- ~~Manual User: Servicer 1~~
- ~~Priority: 2~~

4.2.2 ~~Duplicate Request~~

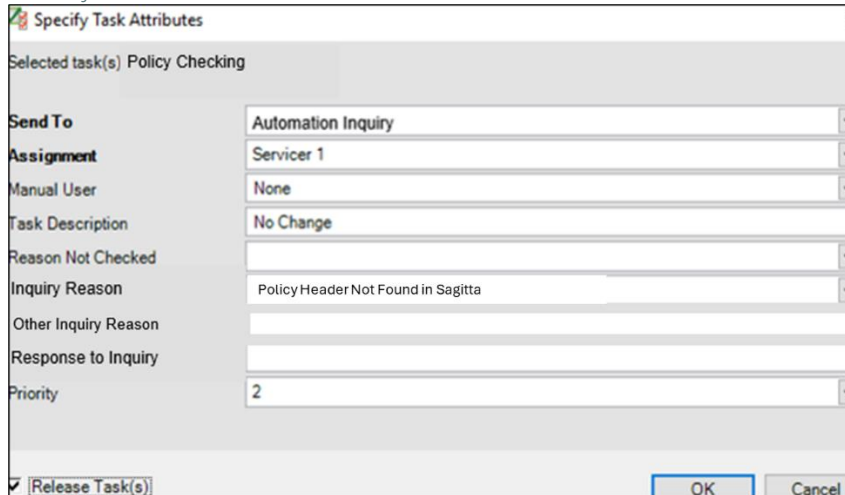

Update the following task attributes, then select “OK”.

- ~~Send To: Internal Processing~~
- ~~Assignment: Servicer 1~~
- ~~Reason Not Checked: Duplicate Request~~
- ~~Priority: 2~~

4.2.3 Policy Header Not Found in Sagitta

Update the following task attributes, then select "OK".

- Send To: Automation Inquiry
- Assignment: Servicer 1
- Inquiry Reason: Policy Header Not Found in Sagitta
- Priority: 2

The dialog box titled "Specify Task Attributes" shows the following values:

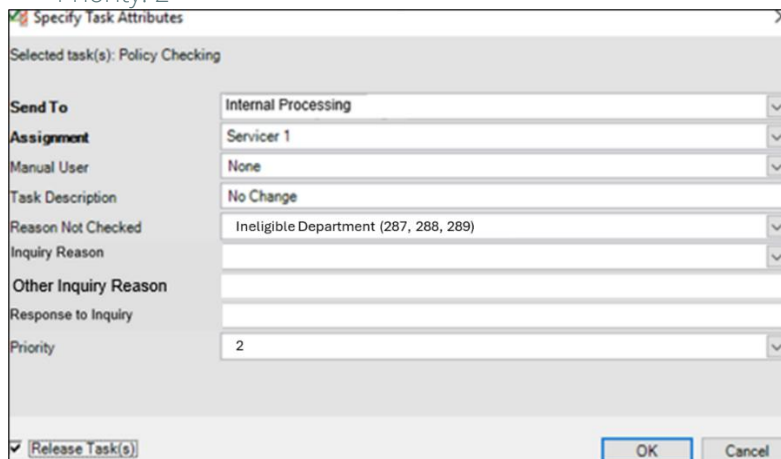

Attribute	Value
Selected task(s)	Policy Checking
Send To	Automation Inquiry
Assignment	Servicer 1
Manual User	None
Task Description	No Change
Reason Not Checked	
Inquiry Reason	Policy Header Not Found in Sagitta
Other Inquiry Reason	
Response to Inquiry	
Priority	2

At the bottom, there is a checkbox for "Release Task(s)" which is checked, and "OK" and "Cancel" buttons.

4.2.4 Ineligible Department Code

Update the following task attributes, then select "OK".

- Send To: Internal Processing
- Assignment: Servicer 1
- Reason Not Checked: Ineligible Department (287 or 289)
- Priority: 2

The dialog box titled "Specify Task Attributes" shows the following values:

Attribute	Value
Selected task(s)	Policy Checking
Send To	Internal Processing
Assignment	Servicer 1
Manual User	None
Task Description	No Change
Reason Not Checked	Ineligible Department (287, 288, 289)
Inquiry Reason	
Other Inquiry Reason	
Response to Inquiry	
Priority	2

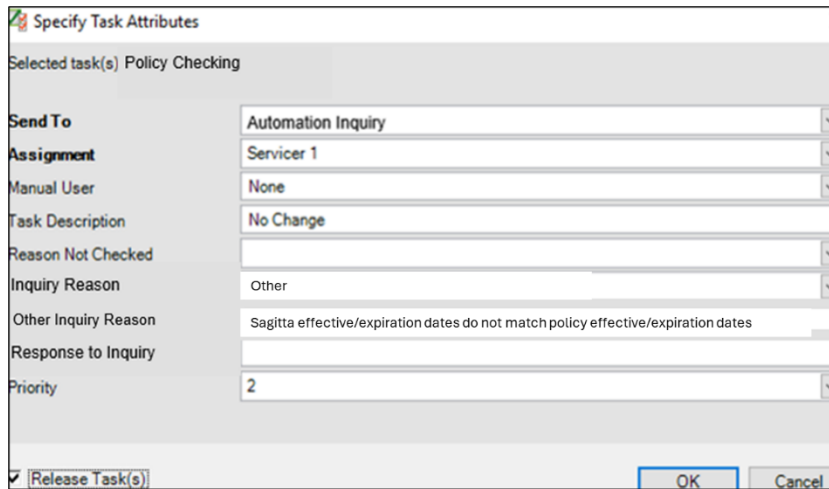

At the bottom, there is a checkbox for "Release Task(s)" which is checked, and "OK" and "Cancel" buttons.

4.2.5 Sagitta Effective/Expiration Dates Do Not Match Policy

Update the following task attributes, then select "OK".

- Send To: Automation Inquiry
- Assignment: Servicer 1
- Inquiry Reason: Other
- Other Inquiry Reason: Sagitta effective/expiration dates do not match policy effective/expiration dates

- Priority: 2

Specify Task Attributes

Selected task(s) Policy Checking

4.3 Load Tasks Reassigned to Bot from Automation Inquiry

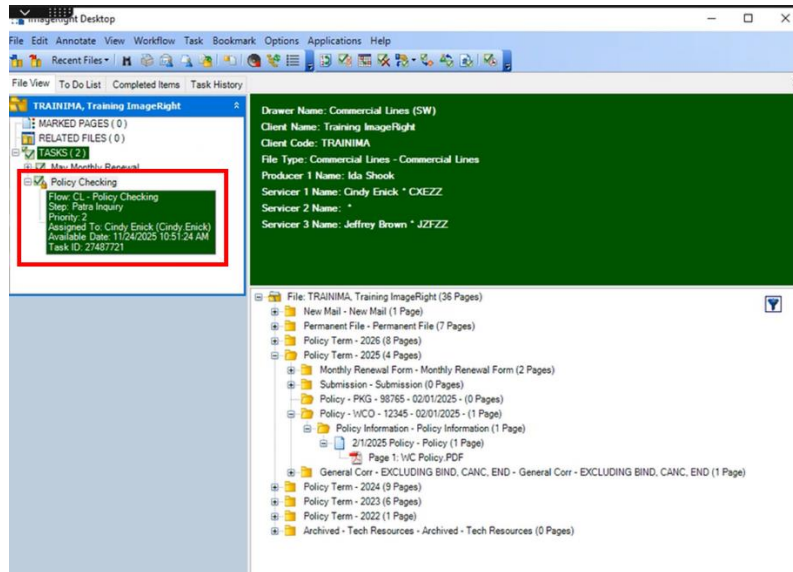

Gather ImageRight PC2.0 tasks in step "Automation Processing" with previous step "Automation Inquiry". Gather all necessary data to create queue item and load to main performer queue.

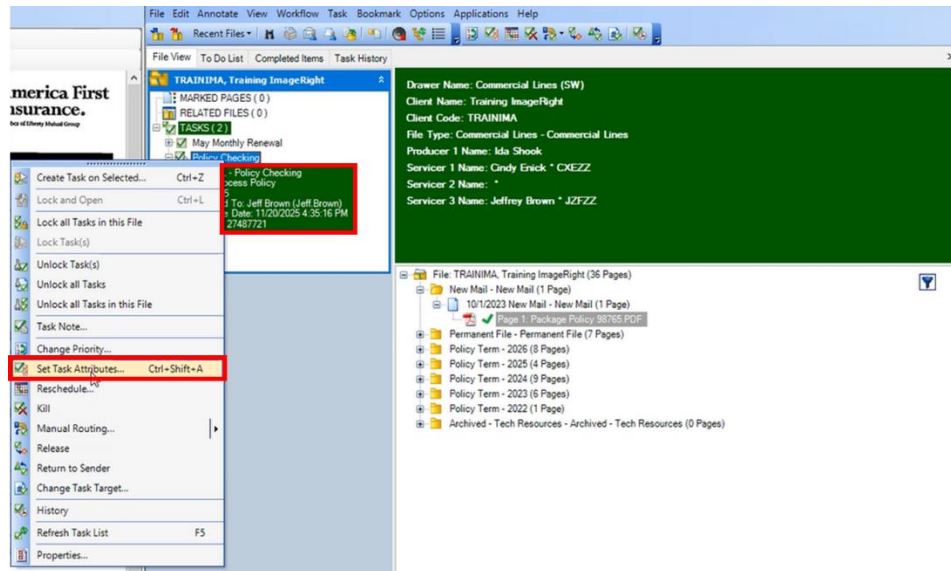

5.APPENDIX

5.1 Additional Screenshots/Steps

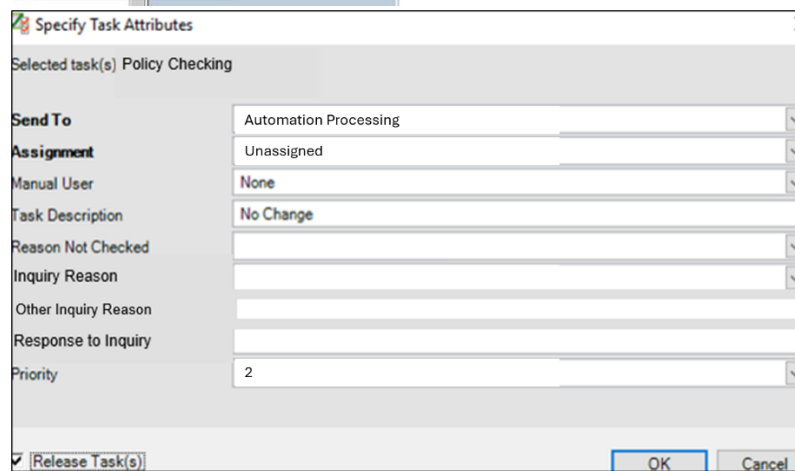

5.1.1 Update Task Attributes

5.1.1.1 If an existing task was found, update task attributes to the following: Step "Automation Processing"; Assignment "Unassigned", Priority "2".

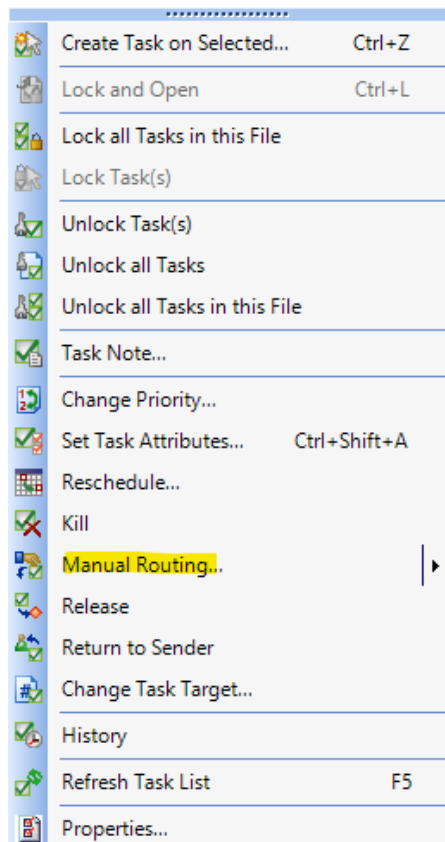

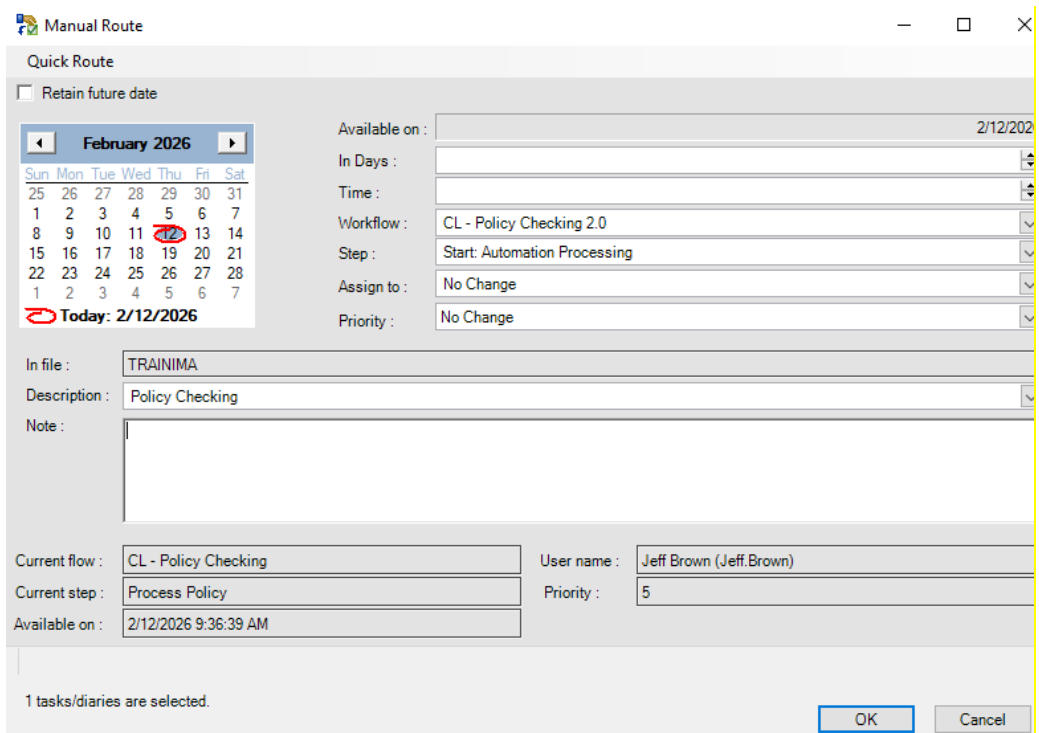

5.1.1.2

5.1.2 Route Task in ImageRight from PC(1.0) Workflow to PC2.0 Workflow

- 5.1.2.1 In the toolbar, click “Task”, then click “Manual Routing”. The manual route box will pop up, enter the workflow and step to move the item into (PC2.0 workflow, step Automation Processing)

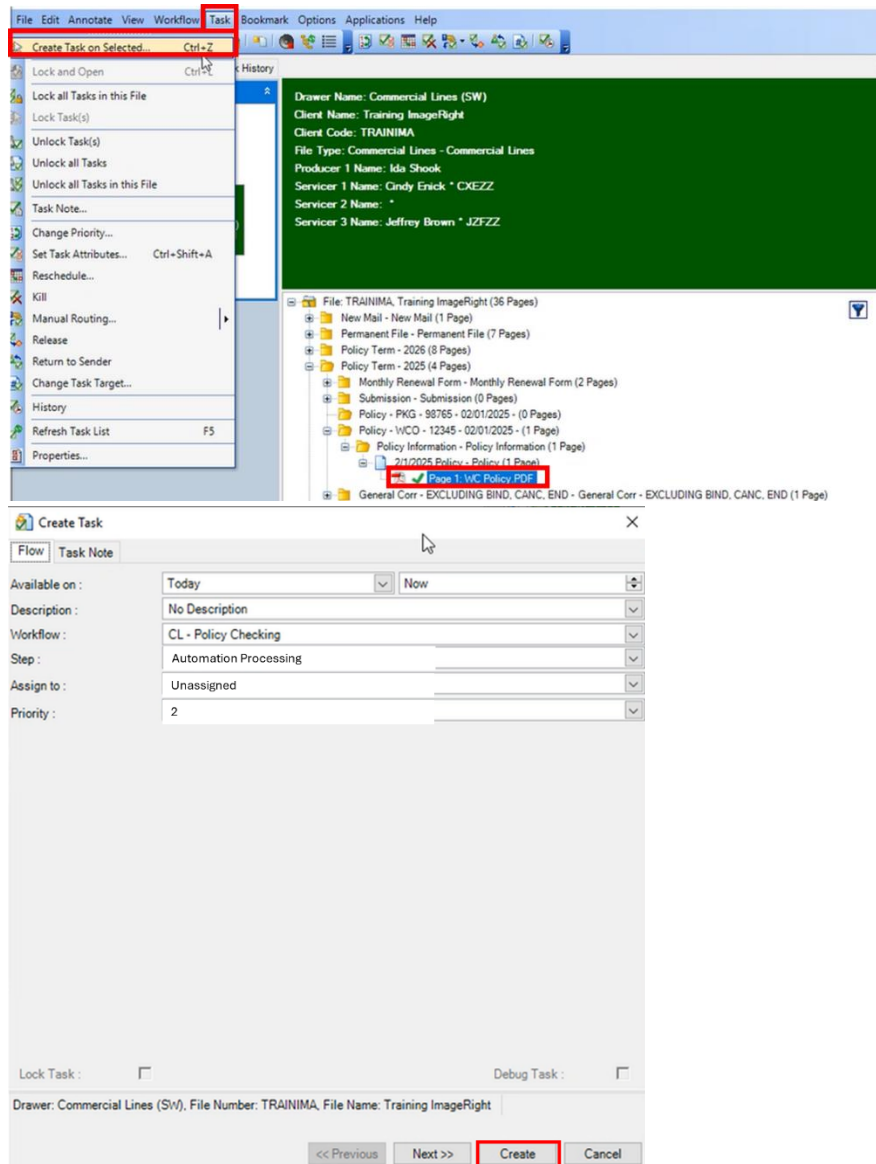

A screenshot of the 'Manual Route' dialog box. The dialog has a title bar 'Manual Route' and standard window controls. It contains several sections:

- Quick Route:** Includes a checkbox 'Retain future date' and a calendar for 'February 2026'. The calendar shows the date '2/12' selected. Below the calendar, it says 'Today: 2/12/2026'.
- Available on:** A date field set to '2/12/2026'.
- In Days:** A dropdown menu.
- Time:** A dropdown menu.
- Workflow:** A dropdown menu set to 'CL - Policy Checking 2.0'.
- Step:** A dropdown menu set to 'Start: Automation Processing'.
- Assign to:** A dropdown menu set to 'No Change'.
- Priority:** A dropdown menu set to 'No Change'.
- In file:** A text field containing 'TRAINIMA'.
- Description:** A text field containing 'Policy Checking'.
- Note:** A large text area.
- Current flow:** A text field containing 'CL - Policy Checking'.
- Current step:** A text field containing 'Process Policy'.
- Available on:** A text field containing '2/12/2026 9:36:39 AM'.
- User name:** A text field containing 'Jeff Brown (Jeff.Brown)'.
- Priority:** A text field containing '5'.

At the bottom, it says '1 tasks/diaries are selected.' and has 'OK' and 'Cancel' buttons.

5.1.3 Creating a new PC2.0 task in ImageRight

5.1.3.1 If a Policy Checking task does not exist yet on the document, create a new Policy Checking 2.0 task in ImageRight in step "Automation Processing", Assigned to "Unassigned", Priority "2".

5.2 To-Be ImageRight Tasking at full roll-out (when PC1.0 task is retired)

Bot will no longer have to check for a Policy Checking (1.0) task in ImageRight, all tasks will be created in the 2.0 workflow.

5.3 Enhancements & Change Requests

5.3.1 Check for and reroute rogue PC2.0 tasks in ImageRight created by users

Recommendation is to not proceed with this enhancement unless proven to add significant work volume to human workers post-MVP deployment. Training should help reduce the likelihood that a user will create a 2.0 task on an ineligible policy. Business should monitor for occurrences with ImageRight reporting.

5.3.2 Assign Download Policies to Second Review & Servicer 1 (Instead of assigning to Policy Detailing)

Patra does not need to detail for downloaded items, so additional cost savings can be obtained by sending downloaded items straight to second review, assigning to a servicer. However, this requirement was identified 9/9/26 and our recommendation is to slate this for enhancement post-MVP as we do not currently collect the necessary data to make the determination if an item is downloaded or not.

To determine if an item is downloaded, check the Sagitta transaction for BEU Transaction Code on any line. If a BEU Transaction Code is present in the transaction history, it is downloaded. See example below:

Storm King Investments LLC - (STORMKIN2) - 307 237-5800
